

ABSTRACT OF THE DISCLOSURE

An electric heating device that is constructed in a unique fashion that allows it to be drapeable so that its three-dimensional, 'scoop-like' shape fits the curvature of a relaxed shoulder, a crooked knee or a crooked elbow, and is held in place by an adjustable strap whose ends are attached to the device. The heating element configuration that is contained within a singular, sealed, water-tight vinyl envelope that is produced as one piece, with the three panels briefly connected at a point where the heating element wiring crosses from one panel to the other.
